THE DRIP STOP

Has this ever happened to you? You've been working at lightning speed, bailing, priming, and gluing. You begin pushing the glued joints together, suddenly, water trickles over the glue joint, fouling what should have been a perfect repair. Some folks have used various clever remedies. Some have stuffed rags, breads, and putties into dribbling pipes. Sometimes these remedies work and other times they cause more problems. The Drip Stop is a high-tech, inflatable, reusable, glue proof bladder, that will stop the trickle fast! You'll save time, you'll also avoid those nagging reworks and call backs. Find out what an extra set of hands can do for you. Call 1-309-937-4133 or contact your local distributor for more information.
