

PT# RIS4002 TWO STATION  
PT# RIS4004 FOUR STATION

## Direct Burial Auxiliary Timer

### FEATURES:

- INDEPENDENT STATION TIMING
- TIMING 0 - 30 MIN
- SOLID STATE CIRCUITRY
- WATER PROOF ENCLOSURE
- BUILT IN MOUNTING BOSSES
- EASY ACCESS TIMING KNOBS

### THE SWITCHER

The Switcher is a water proof direct burial timer that will allow you to independently control up to four valves one set of wires. The Switcher is the perfect device for adding valves to an existing irrigation system when running new irrigation wires is not feasible due to time constraints or labor costs. Each station on the Switcher can be individually timed from 0-30 minutes in 2 minute increments. The Switcher has no internal batteries and receives its power from your main timer. The Switcher is designed to be mounted in an existing valve box using a pair of existing control wires to supply it with 24vac from your main timer. When the Switcher receives power it begins timing through each station sequentially for the programmed time. There are many uses and applications for the Switcher for more information please call 1-309-937-4133 or contact your local distributor.
