

TIME SAVING PRODUCTS FROM VR MANUFACTURING

ULTIMATE BROKEN WIRE SOLUTION

FEATURES:

- TURN ANY CONTROLLER INTO A TWO WIRE CONTROLLER
- 2 OR 4 STATION MODELS
- TWO PIECE DESIGN
- WATER PROOF CASE
- SOLID STATE CIRCUITRY
- BUILT IN MOUNTING BOSSES

The Quick Link

Broken irrigation wires can be an expensive time consuming headache and that's why we've designed the Quick Link. The Quick Link will control up to four 24 vac valves on a single pair of control wires. The Quick Link consists of a two piece design, the transmitter and the receiver. The transmitter gets installed in the timer and the receiver gets installed in the valve box with a good wire connecting them together. The Quick Link uses a power line communication technology to communicate between the transmitter and receiver. By sending signals over a set of good control wires the Quick Link is able to control valves with broken wires. Whenever your main timer comes on and puts power to one of the transmitters inputs, it sends a signal down the good wire to the receiver telling it to turn on the appropriate valve. When using the Quick link to control down valves you won't lose your timers programmability! You can manually activate valves, run two minute tests, or even run multiple programs. Once the Quick Link is installed, your irrigation system runs as if you never had any broken wires! For more information contact your local distributor or call 1-309-937-4133.
